

Job Title: QA Analyst

Responsibilities:

- **Test Large-Scale eCommerce Applications:** Conduct manual testing on large-scale eCommerce web applications, supporting all phases of the software testing life cycle.
- **Requirement Analysis:** Analyze defects and enhancement requests reported via JIRA tickets. Collaborate with the team to define testing scope.
- **Test Case Development:** Develop high-quality test objectives and test scripts using Zephyr Scale to ensure comprehensive coverage of functional requirements.
- **Testing Types:** Perform various testing types, including smoke, integration, functional, ad-hoc, accessibility, browser compatibility, mobile, and regression testing.
- **Defect Tracking:** Track defects from identification to closure, ensuring timely updates to status, resolution, and related comments.
- **Regression Test Maintenance:** Develop and maintain regression test cases to ensure the stability of existing functionality after updates or changes.
- **Status Communication:** Communicate test progress and potential issues impacting task completion, working to resolve blockers in a timely manner.
- **Team Collaboration:** Actively participate in team meetings to share progress, discuss challenges, and collaborate on solutions.

Skill Set Requirements:

- **Experience:** 5-7 years of experience in manual testing with large-scale web applications.
- **Database Testing:** Exposure to SQL, with the ability to write queries and analyze results.
- **Log & End-to-End Testing:** Experience reviewing Splunk logs, performing end-to-end testing, and validating back-end jobs.
- **Web Services/API Testing:** Familiarity with testing web services and APIs using Postman.
- **eCommerce & ATG Experience:** Experience in the eCommerce domain and with the Oracle ATG platform is a plus.

Tools & Technologies:

- **JIRA:** For issue tracking and test management.
- **Zephyr Scale:** For managing and creating test cases.
- **Postman:** API testing.
- **Splunk:** For reviewing the logs
- **SQL:** Database testing.
- **Oracle ATG:** For eCommerce application development.
